WORKSHOP ACCEPTABILITY AND TRANSPORTATION
Paris, November 25, 2010

LAMIH : Laboratory of Industrial and Human Automation, Mechanical engineering and Computer Science

- Several projects in the domain of transportation, especially related to car driving.
 - VOHLAND (2009-2013)
 - To develop a new generation of electric power steering which takes into account the characteristics of drivers with reduced mobility
 - ITERATE project (2009-2011)
 - To develop and validate a unified model of driver behaviour and driver interaction with innovative technologies in emergency situations
 - ABV (2009-2012)
 - To automate (partial or complete withdrawal of the driver) the low speed (up to 50km/h) driving on secured routes (with a degree of quality service)
 - SARI project (2006-2010)
 - To provide drivers with better information about the driving difficulties facing them. Acceptability of the means of information (rumble strips, variable message signs, etc.) was analyzed in this project through four aspects : social, individual, legal, and economical
 - ARCOS (2001-2004)

WORKSHOP ACCEPTABILITY AND TRANSPORTATION
Paris, November 25, 2010

What are the links between trust, acceptability, and acceptance?

- The ARCOS project
 - French acronym for the Driving Safety Research Program
 - Financed by the PREDIT (French acronym for the Program of Research and Innovation in land Transport)
 - Interdisciplinary project aiming at developing a global approach of the 'Vehicle-Driver-Infrastructure' system in 4 main actions
 - Managing distance between the vehicles
 - Preventing collisions with fixed or slowed obstacle
 - Preventing vehicles from leaving the road
 - Alerting vehicles upstream of incidents/accidents
 - LAMIH :
 - Developing an auto adaptive cruise control (AACC)
 - Analysing the cooperation between the driver and the AACC
 - » Trust

What are the links between trust, acceptability, and acceptance?

- The ARCOS project : 3 experimentations carried out using a driving simulator
 - LAMIH Psychology & INRETS MSIS
 - ACC with fixed reference speed (130km/h) and time headway (1.5sec) : $N=23$
 - LAMIH Psychology & LAMIH Automation
 - Conventional adaptive cruise control (ACC) $N=42$
 - Speed from 40 to 170km/h in steps of 5km/h
 - Time headway : 1, 1.5, 2, or 2.5 sec
 - Auto adaptive cruise control (AACC) $N=30$ (15 among them participated at the experiment with the ACC)

What are the links between trust, acceptability, and acceptance?

- The Auto Adaptive Cruise Control (AACC)
 - based on conventional ACC
 - with better know-how and know-how-to-cooperate:
 - Cruising speed, time headway, acceleration/ deceleration matched to driver's driving style;
 - If the driver doesn't intervene, AACC adjusted the set speed automatically as required by the road configuration : village; bends in the road; road type (motorway or major roads).

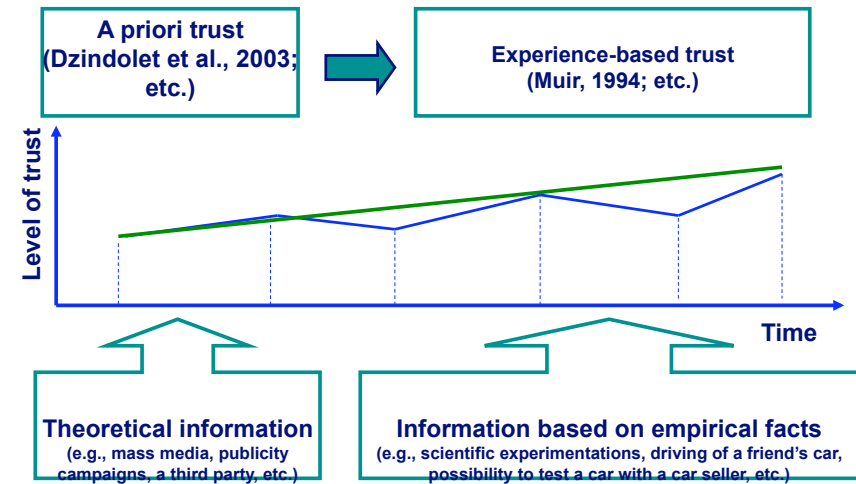

What are the links between trust, acceptability, and acceptance?

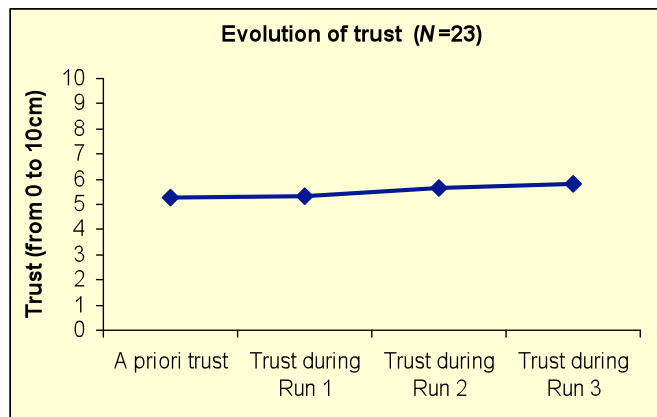

What are the links between trust, acceptability, and acceptance?

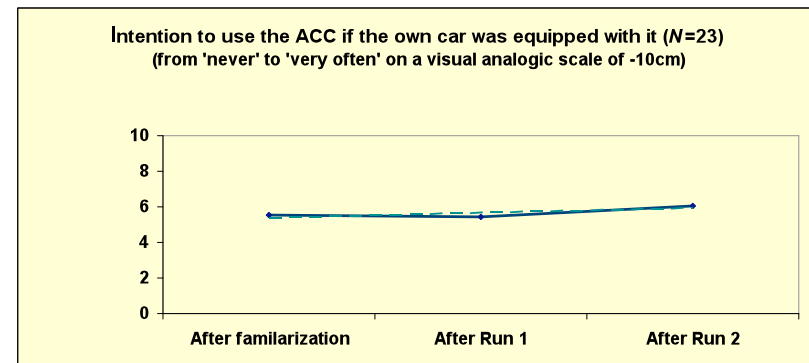

What are the links between trust, acceptability, and acceptance?

What are the links between trust, acceptability, and acceptance? Intention to buy a car equipped with ACC

What are the links between trust, acceptability, and acceptance?

What are the links between trust, acceptability, and acceptance?

	AACC mode (between subjects)		ACC kind (within subjects)	
	AACC 1	AACC 2	Adaptive (ACC)	Auto adaptive (AACC)
	N=15	N=15	N=15	N=15
Trust in the device (from 0 to 10cm)	7.03 (2.15)	7.36 (1.53)	6.80 (2.37)	7.41 (1.09)
Mean use on motor way (%)	86.54 (15.29)	90.39 (5.90)	90.06 (10.26)	92.99 (5.75)
Mean use on major roads (%)	79.47 (17.59)	85.15 (5.99)	71.55 (20.54)	87.71 (6.68)
Total use (%)	81.81 (15.40)	86.75 (5.37)	75.17 (13.31)	90.35 (5.17)

What are the links between trust, acceptability, and acceptance? Intention to buy a car equipped with ACC
